Academic Projects

- **Waste Management Improvements in Cities Using IoT | 2023**

This project explores the integration of IoT technologies to improve waste management in urban areas. By implementing sensor-based systems, the project optimizes waste collection, monitoring, and disposal processes. Real-time data collection through IoT enhances resource allocation, ultimately contributing to more efficient and sustainable waste management in cities.

- **Use of Artificial Neural Network to Identify Fake Profiles | 2023**

The project utilizes machine learning algorithms for spam and fraud detection, with a focus on identifying fake profiles. Deep Learning techniques, specifically Artificial Neural Networks (ANN), were employed to recognize fake images. The dataset for this project was sourced from Facebook, demonstrating the effectiveness of ANN in profile verification and fraud prevention.
